

Requirement (UFE 1.x)

- Some knowledge of fighting game terminologies and overall understanding of how it works (hit boxes, active frames, hit stun etc.)
 - Unity 2018 or higher
 - **Basic understanding of Unity:**
 - Know your way around the basic tools (project, inspector, hierarchy, scene view)
 - Terminologies
 - How to use [prefabs](#)
 - How to handle your own 3D models and animations
 - For more information and full documentation please visit ufe3d.com
 - For more on Unity, visit unity3d.com
-

Package

If acquired from Unity's Asset Store:

- Go to Window > Asset Store > Downloaded Assets
- Select Universal Fighting Engine and click on the Import/Update button.

If acquired from other stores:

- Double click the unitypackage file or
 - Go to Main Menu > Assets > Import Package > Custom Package
 - Browse to the location of the downloaded unitypackage and open it.
-

Project Settings

Upon installation UFE will attempt to automatically update the Input Manager under Project Settings. If this fails, you might end up with a few errors such as controls not working or characters falling off the screen. A common description of this error can be found in the Unity's error console as *"UnityException: Input Axis (..) is not setup"*. To fix this error and update your Input Manager settings follow these steps:

- Close Unity.
 - Using the explorer and navigate to (Project Folder)\Assets\UFE\ProjectSettings
 - Open ProjectSettings.zip
 - Extract its content to (Project Folder)\ProjectSettings
 - Reopen your project in Unity
-

Getting Started

If you decide to start a new scene, skip to *Starting a new scene*.

Opening the demo files:

- Open `.\UFE\Scenes\TrainingRoom.unity`

- Click on `Window` → `U.F.E.` and open all of the 3 editors (4 if you have Fuzzy AI).
- Click on `.\UFE\UFE_Config.asset` to open the [Global Editor](#) for this configuration file.
- To select a character unfold the [Characters](#) option, select a character and click to open the [Character Editor](#). You can also navigate to `.\UFE\Characters\[Character]\[Character].asset` under the Projects tab.
- To open a Move in the [Move Editor](#), unfold the [Move Sets option](#) under the [Character Editor](#) or navigate to `.\UFE\Characters\[Character]\Moves\[Move].asset`.
- Arrange the tools as you please. Here is an example of how you can organize your window. (click to enlarge):
- Click **Play** at any time to test the demo.

Starting a new scene:

- Click `File` > `New Scene`
- Select the Main Camera in the Hierarchy view.
- (SOURCE VERSION) Drag `.\UFE\Scripts\UFE.cs` to the inspector where you have your Main Camera selected.
- (OTHER VERSIONS) Drag `.\UFE\Plugins\UFE.dll\UFE` to the inspector where you have your Main Camera selected.
- (UFE 1.5 or lower) Drag `.\UFE\Scripts\GUIScript.cs` to the inspector where you have your Main Camera selected.
- Drag `.\UFE\UFE_Config.asset` (or your own custom UFE config file) to the field `UFE_Config` under `UFE (Script)`, like so:

Known Issues

Obsolete Libraries Warning

If you have the Network addon you might see this warning whenever you update a script:

```
Assets/UFE Addons/Network Support/LegacyNetworkMultiplayerAPI.cs(79,50):  
warning CS0618: `UnityEngine.NetworkView.RPC(string, UnityEngine.RPCMode,  
params object[])' is obsolete: `NetworkView RPC functions are deprecated.  
Refer to the new Multiplayer Networking system.'
```

The current Netcode for UFE uses a slightly deprecated version of the Network Libraries. Not to worry, these libraries won't be out of Unity anytime soon. We will be sure to update these to the new algorithms when the time is right.

FMOD Error Warning

If you have the VideoIntroScreen selected under the [GUI Options](#), upon starting the *TrainingRoom* scene and running the game you might see this error:

```
Error: Cannot create FMOD::Sound instance for resource (null), (An invalid  
parameter was passed to this function. )  
UnityEngine.WWW:get_movie()  
<LoadMovie>c__Iterator7:MoveNext() (at  
Assets/UFE/Scripts/UI/Templates/VideoIntroScreen.cs:91)
```

This error happens when UFE attempt to stream videos from the StreamingAssets folder or the web. Although inconvenient, this message doesn't seem to affect the game (or video streaming) in any way.

If you don't want to see this error, switch the IntroScreen template to TextureIntroScreen (located in the same folder). This screen loads a static image instead.

Updates

To update an existing copy of your UFE follow [these instructions](#).
